TARIFF FORMAT

Page Numbering - Page numbers appear in the upper right corner of the page. Pages are numbered sequentially. However, new pages are occasionally added to the tariff. When a new page is added between pages already in effect, a decimal is added. For example, a new page added between pages 14 and 15 would be 14.1.

Page Revision Numbers - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current page version on file with the Commission. For example, the 4th revised page 14 cancels the 3rd revised page 14. Because of the various suspension periods and deferrals the Commission follows in its tariff approval process, the most current page number on file with the Commission is not always the tariff page in effect. Consult the check sheet for the page currently in effect.

Paragraph Numbering Sequence - There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level:

2
2.1
2.1.1
2.1.1.A
2.1.1.A.1
2.1.1.A.1.(a)
2.1.1.A.1.(a).I
2.1.1.A.1.(a).I.(i)
2.1.1.A.1.(a).I.(i).(1)

Check Sheets - When a tariff filing is made with the Commission, an updated check sheet accompanies the tariff filing. The check sheet lists the pages contained in the tariff, with a cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision. The tariff user should refer to the latest check sheet to find out if a particular page is the most current on file with the Commission.

SECTION 3 - DESCRIPTION OF SERVICE

3.4. Timing of Calls

The Customer's long distance usage charges are based on the actual usage of Carrier's network. Usage is measured in Conversation Minutes. The minimum call duration is six (6) seconds, and calls are billed in six (6) second increments. The called party answer signal and the calling party disconnect signal are determined by hardware answer supervision, provided that such answer supervision is available from the local telephone company. If hardware answer supervision is not available from the local telephone company, then the Carrier will employ software answer supervision, and up to sixty (60) seconds of ringing will be allowed before it is billed as usage of the network. Billing will terminate when either party hangs up. The company will not charge for uncompleted calls.

3.4. Calculation of Distance

Usage charges for all mileage sensitive products are based on the airline distance between the rate centers associated with the originating and terminating points of the call.

The airline mileage between rate centers is determined by applying the formula below to the vertical and horizontal coordinates associated with the rate centers involved. The Company uses the rate centers and associated vertical and horizontal coordinates that are produced by Bell Communications Research in their NPA-NXX V&H Coordinates Tape and that are contained in NECA Tariff No. 4.

Formula:

$$\frac{(V1-V2)^2 + (H1-H2)^2}{10}$$

3.4. Minimum Call Completion Rate

A Customer can expect a call completion rate of not less than ninety-seven percent (97%) during peak use periods for all Feature Group D services ("1+" dialing).
